NEW UPGRADE

I've used Snagit for years and continue to be amazed by the improvements introduced with each update.

It is just over 12 months since I reviewed Snagit 2018 and I must say that I am very impressed with the latest release of Snagit 2019. TechSmith have listened to their clients and have introduced many of their suggestions for improvements to the app. I've tried other screenshot type programs and always come back to Snagit. It simply continues to be the benchmark with each new version and like all good software, I probably only use about 30% of the features.

New Features in Snagit 2019 include-

Combine Images NEW!

Take separate Snagit images and combine them into one, organised piece of content.

Favorites NEW!

A new Favourites tab allows you to get to your commonly used tools quickly. From arrows, to callouts, text styles, shapes, even blur effects can all be added as Favourites. Just right click and select 'add to favourite'. This is an important aspect of enabling user customisation.

Convert your standard screenshots into simplified graphics.

Simplify **NEW!**

Stamp Search **NEW!** Search stamps faster than ever

Quickly search through nearly 2,000 pre-made stamps containing icons, symbols, cursors, and more that can be easily applied to your images.This is great for marking up screenshots or even building simple infographics.
